

## Proposed Solution Template

Date	19 September 2022
Team ID	PNT2022TMID29109
Project Name	Real-Time Communication System Powered by AI for Specially Abled

### Proposed Solution Template:

S.No.	Parameter	Description
1.	<b>Problem Statement</b>	Creating a smooth communication between specially abled person (deaf and dumb) and normal person who does not know sign language.
2.	<b>Idea / Solution description</b>	Making a software application that acts as translator between the specially abled person and normal person.
3.	<b>Novelty / Uniqueness</b>	The software converts the sign language to text and from text to voice which helps people to have normal conversation.
4.	<b>Social Impact / Customer Satisfaction</b>	The software creates a huge impact by making the specially abled person to hold normal conversation to all other people and which makes the customer happy.
5.	<b>Business Model (Revenue Model)</b>	We can create a monthly based service or premium pack for extra features. The software is free which is to help the specially abled.
6.	<b>Scalability of the Solution</b>	We can add other country sign languages and translate the sign language from english to other languages which helps the software to grow further.
